

# Introduction

you for choosing our massage bathtub series. We provide a 3 years warranty after-sale service upon purchase of our products. If you need any assistance during this process, please contact a local distributor or our company directly.

To use our products safely and effectively, please read these instructions carefully. Improper installation, operation, or maintenance will cause damage to the products and will result in an additional repair fee.

Please note that we reserve the right to change this manual without prior notice. Due to the difference between general market requirement and our individual custom product, please refer to the corresponding content in this manual according to the chosen product and its functions. By doing so, you can correctly install and operate the product according to its specifc features.

In order to correctly install and maintain the product, please pay special attention to the warning sign below.

Notice

This symbol indicates that errant handling after disregarding this symbol could result in personal injury or property loss.

In order to install, use, and maintain this product correctly and safely, please read these instructions thoroughly

- This manual is a valuable source of product information to help the user handle the product safely and correctly. Please put it in a safe place where it cannot be lost or soiled
- Preparation before installation
- Make sure the area in which you install the bathtub is strong enough to bear the total weight of the bathtub, maximum water volume, and the user.
- The installation area must be waterproofed, otherwise the downstairs area below the bathtub will get damaged if water leaks.
- The installation area must be equipped with water supply, power supply, and drai nage:

	External circuitry is equipped with high sensitive and fast type leakage
^	protection switch. (Induced current rating below 15MA; trip time
$\triangle$	should be less than 0.1 second: rated current is above 30A.)

Notice \*The product should be installed alongside ground and electric

leakage switches by a licensed electrician.

Please reserve a drainage hole the size  $\ge \emptyset$  50mm (1.97 inch) to make sure the drainage pipes accord with the water valve

The user needs to reserve the connectors of 1/2" external thread cold/hot water hoses, which outstand the wall 30mm(1.18 inch). It is suggested to install a valve in each pipe; these installation locations should be designed by the user so as to allow them to properly maintain it. Because each bathroom or bathtub's power and drain are slightly dierent, please place the bathtub in an optimal location according to its surroundings. The following illustration may be used as a reference layout.

The safe distance between power supply and water supply should Δ Notice | be at least 30cm(11.8 inch).

## Inspection Before Installation

. Be careful when removing the bathtub from its packaging so as to avoid contact with any harsh surfaces. Remove the staples or fold them into the box. Additionally, it is advisable to lift the bathtub by its rim during handling to minimize any risk of damage. Retain the packaging box until the satisfactory installation of the product has been ensured.

- 2. Conduct a thorough inspection of the bathtub components and skirts. In the event that any damage or defect is detected in the nish refrain from installing the bathtub. Please note that any damage or defect claimed after installation is not covered by the warranty. The responsibility for shipping damage terminates once the carrier has delivered the products in good order
- 3. Any claims for damage should be referred to the carrier. For a comprehensive understanding of the warranty coverage and its limitations, please refer to the published three-year warranty section in this manual.
- Before beginning your installation, please take note of the following guidelines
- 1. Compliance with all local and building codes is mandatory.
- 2 Determine the necessary tools required for the installation
- 3. Install drain/overow per the manufacturer's instructions and the Technical Specications Manual. It is the installer's responsibility to ensure a water-tight installation of the drain. Any drain leakage is not covered by the bathtub warranty.
- 4. Install the faucet and shower head at this stage (if applicable). It is recommended that a gualied plumber installs the faucet. Please see additional notes on freestanding section for faucets.
- a). It is the installer's responsibility to properly install the spout plumbing and ensure compliance with local codes.
- b). We do not warrant connections of water supply ttings and piping systems, or drain/overow systems. Neither are we responsible for any bathtub damage that occurs during the installation nrocess
- c). Additional bathtub drain parts and plumbing are commercially available at plumbing and hardware stores
- d). A non-ammable protective barrier must be placed between the bathtub unit and any soldering work to prevent bathtub damage

 $\triangle$ 

Notice

Please check whether all parts are intact. Please contact our company with any oncerns or questions. After inspection, immediately dispose of unneeded packaging. If left, this packaging may cause injury from any carelessly placed wooden frames, nails, cardboard, or sealing straps n addition, please do not let children play with the packing mater

This equipment is designed for indoor use only. Use supply wires that are suitable for  $167^{\circ}E(75^{\circ}C)$  including the temperature rating of the supply conductors to be used. This unit should be electrically grounded and installed by a licensed contractor, electrician, and plumber Parts containing live elements (except parts supplied with safety extra-low voltage

not exceeding 12 V) must be inaccessible to a person in the bath. Earthed appliances must be permanently connected to fxed wiring. The termina

compartment includes a green-colored terminal or a wire connector marked with "G", "GR", "GROUND", or "GROUNDING". To reduce the risk of electric shock,

connect the terminal or connector to the grounding terminal of your electric service or supply panel with a conductor equivalent in size to the circuit conductors supplying the equipment. Parts incorporating electrical components (except remote-controlled devices)

must be located and fxed so that they cannot fall into the bath. With the exception of specifed power, please do not use alternate power. This can cause fre or electric shock.

An electrical leakage protection switch should be installed outside the bathroom. If

- this switch is not installed, fre or electric shock can occur. •Do not use a broken power supply, power plug, or the loose socket. These may
- cause fre or electric shock.
- Do not modify the power supply cord. Also avoid using it with an extension cord or combining it with other equipment using multiple plugs. Doing so could lead to
- shocks, overheating, or fre.

- Notice Building materials and wiring should be routed away from the motor/pump o blower or other heat-producing components of this unit. A pressure wire SMconnector is provided on the exterior of the motor/pump and heater to permit connection of a No. 8 AWG solid copper bonding conductor between this unit and all other electric equipment and exposed metal in the vicinity, as necessary to comply with local regulations.
- Before the installation is completed, please use cardboard to protect th hathtuh from damage Do not use open fames in the bathtub (such as a lighted cigarette) or this could damage the bathtub. Do not stand on the bathtub while working. Doing so could cause one to slip and fall or could otherwise damage the product. Notice Install securely in accordance with the Installation Manual. Improper installation can lead to water leaks that damage or ruin household property. After the installation is completed, the product should undergo trial operation to ensure that it has been installed properly. • Size chart a)=== ٥ ک 0 Installation instruction Testing Before Installation there may be some loose hose connections due to transport. You should water test the product again before installation. The steps are as follows: a. Place the tub on a at surface in an area where it may be drained after testing. Adjust the feet to make the bathtub level. b. Check if anything is loose within the connection system. c. Fill the tub with water to the overfow and allow it to sit for 10 minutes. During this time. inspect the tub for leaks. d Inspect all joints visually for any signs of leaks. If any leaks are detected, do not proceed with the installation of the bathtub. e. Insert the plug, turn on all functions for a few minutes (i.e., massage, air bubble, waterfall, and other features), and inspect the tub completely. Any defect must be reported to your dealer/distributor prior to installation in order to have it covered under warranty. Adjust the leveling feet We designed several leveling feet to adjust the bathtub. Please use a wrench or level ruler to level the bathtub. Note: If the bathtub is not level, it may lead to one or all of the following: -noise increase excess water in the hoses or the drainage -bathtub shaking 2.Adjust screw nut to the level position 1.Adjust height of the leveling feet Installation instruction • How to connect the water? For ease of use, our bathtub is equipped with stainless steel cold and hot water hoses (connector ø 1/2"). Please connect the cold and hot water hoses to the bathroom's cold and hot water hoses accordingly. Before connect bathtub water inlet pipe, first open water pipe for a period of time, then put filter screen to ensure that the debris will not enter the bathtub pipe. So that we can effectively extend the life of the fitting. The drain pipe is 31.5" long and the ground drain should be 12" - 20" away from the bathtub drain so that the drainpipe can form an S-bend for odor isolation

Insert the drain-pipe to the drain-hole on the floor, and then cover it with water retaining cover to prevent waste water spilling.

turn on the Whirlpool or Air system at any time if the jets or air inlets are not fully immersed in water. Doing so may cause water to spray outside the bathtub area.

6. Turn on all the functions and run for 15 minutes.

8.Clean the "suction cover" by removing any hair or lint.

7 Drain tub completely.

water supply.         To avoid other damage, please do not drop or strike the bathtub with hard objects. Doing so could crack or scratch the bathtub or cause leaks that damage or ruin household property.         When the product is at work, you cannot cut off any connection lines and split the bus master and control panel. Any part of the control panel and the bus master CAN NOT be split by the user. Doing so may cause product leakage, electric shock, or other accidents.         The ground fault circuit interrupter (GFCI) should be tested regularly. It is ideal to test before each use.         Use water or mild detergent to clean the product. Do not use acids, alkalis, chemical organic solvents, or acidic/alkaline cleaning agents. Otherwise, the bathtub will experience surface damage. When water or a neutral detergent cannot remove stains, use a clean cloth with a little alcohol to remove stains.         Plating parts maintenance: use cotton fabric to scrub.         Light scratches and dulled areas may be restored to original luster by coarse grinding using NO. 1200 waterproof sandpaper dipped in water. Then fne grind by using NO. 2000 waterproof sandpaper dipped in water. Then fne grind by using NO. 2000 waterproof sandpaper dipped in water. Then fne grind by using NO. 2000 waterproof sandpaper dipped in water. Sinally, polish with a soft cloth and a polishing agent.         When not in use, please keep the bathtub well-ventilated and dry; avoid contact with corrosive substances; cut off electricity and cut off water supply.         Torubleshooting Guide         Pump/motor and jets do not       1. No power to pump/motor for the user monections and the fuse in blue terminal box.
